Newly submitted claims 27-33 have been renumbered as claims 24-30 according to 37 CFR 1.126. The claims are referred to as claims 24-30 hereinafter.

Newly submitted claims 24-30 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: the devices of claims 24-30 can be made by materially different processes such as implantation processes.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 24-30 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 7-9 are rejected under 35 U.S.C. 102(a) as being anticipated by Uglow et al.

The portion of the C-doped layer having a substantially linear C concentration (below thickness TT) is encompassed by claim 7. The profiles recited in claims 8 and 9 are disclosed because neither claim 8 nor claim 9 provide a frame of reference for distinguishing the direction of increasing C concentration from that disclosed.

Claims 1-6 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uglow et al as applied to claims 7-9 above, and further in view of Yew et al, newly cited.

Uglov et al does not disclose forming interlayer dielectric layer such that it is deposited between conductors.

Yew et al discloses depositing interlayer dielectric on and between interconnect layers 122a and 124a followed by another series of processes for manufacturing the dual-damascene structure.

It would have been within the scope of one of ordinary skill in the art to combine the teachings of Uglov et al and Yew et al to enable formation of a two level multilevel interconnect system. (col 4, lines 27-30)

One of ordinary skill in the art would have been led to the recited C concentration profiles and concentrations given the guidance of Uglov et al related to the effects of C concentration on dielectric constant and etch rate.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

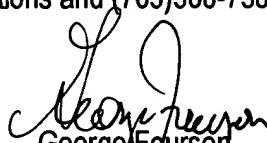

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
